AGNES Interactive®

A Collaborative Patient Assessment Tool for Telemedicine Clinical Exams:

- **Delivers 100% Live Access to Patient**
  Transmission of all medical data is done in REAL-TIME and does not rely on any content sharing applications.

- **Provides Complete Physician Mobility**
  Remotes users have secure web-based access to exam site.

- **Captures Quality Medical Data**
  Integrates with over 40 medical devices.

- **Enables Live Video Conferencing**
  Embedded video conferencing, or third-party conferencing, allows clinician and patient to teleconference with the remote specialist.

- **Integrates with EMRs**
  Save session information as a single universal HL7 configuration file or as a single *Patient Encounter PDF Report* for easier integration with your EMR.

- **Streamlines Clinical Workflow**
  AGNES Interactive API may be used to embed the telemedicine platform inside a third party application.

What Is AGNES Interactive?

AGNES Interactive® is a web-based telemedicine software that enables remote clinical healthcare providers to capture and share medical device data, exchange documents and medical images in real-time, and participate in a live video conference - all in a single web-based platform.

How Does it Work?

AGNES Interactive is installed and operational in minutes - no back-end servers needed. Once installed, the web-based software aggregates clinical device diagnostics, vital signs data, session encounter documents and live video conferencing and then securely exchanges that information in real-time to the remote consulting physician.

Unlimited Remote Users and No Recurring License Fees

There are no user fees, doctor fees or hosting fees associated with *AGNES Interactive*. Just a one time licensing fee for sending site and zero cost for unlimted receiving sites.

Choose Modules as Needed for Your Requirements

Medical Video:

Allows you to transmit live medical images and video from your integrated medical scopes and devices in 100% real-time.
Video Conferencing:

Clinician and remote specialist can teleconference, using the point-to-point Video Module or the in-browser Vidyo Room Integration for multi-point calls.

Stethoscope:

Easily connect a USB digital stethoscope to stream live heart/lung sounds to the remote physician and eliminate the need for stethoscope hardware at the receiving end. When used with *Interactive Stethoscope*, it also enables software based control for frequency ranges and volume.

Vital Signs:

Allows you to integrate medical data directly from an external spot vital sign monitor, so you can include and capture this information as part of the exam session, for the physician to review and consider.

Session Documents:

To capture the information gathered during the patient assessment in a format that can be shared or saved into an EMR system.

Universal HL7 and EMR Filing:

Seamlessly export information collected during a patient session, to a single HL7-based configuration file. The HL7 module eases the integration with your organization's infrastructure by providing a file that can interface with EMR systems. In a single step, information is ready to be stored with the patient's record.

Integrates with 40+ Medical Devices to Gather Quality Clinical Data:

Multipurpose Camera & Scope System

Abdominal Ultrasound Probe

Digital Stethoscope

Vital Signs Monitor

Other Scopes & Devices

Minimum System Requirements[1]:

Server/Clinic Side:

- Processor**: Core i7 2.5ghz or better

- Memory**: 4G or better (8G is recommended) [2]

- Operating System: Windows 7, Windows 10, 32 or 64-bit

- Browsers: Latest Google Chrome or Mozilla Firefox

- Bandwidth: may range from 256 kbs - 2 mbs, based on modules purchased.

- Soundcard: Realtek sound card (recommended) for use with *Stethoscope* module.

Remote/Dr. Receive Side:

- Operating System: Windows (any version), OS X (Mac)

- Browsers: Latest Google Chrome or Mozilla Firefox

- Bandwidth: may range from 256 kbs - 2 mbs, based on modules purchased.

[1] Results may vary if using your own video conferencing software or you have other software installed on the PC.

[2] **For best results, use with AMD's small form factor PC**: i7 4800M processor, 2.70ghz with 8G of memory.
