Labor Befund

Endbefund: **495426283**
Eingang / Ausgang: 22.03.2021 / 22.03.2021
Arztnummer: 10393
Einsenderkennung: **XX192381**
Patient: **Badagadze Nina**
weiblich 30.05.1979

Untersuchung		Ergebnis	Einheit	Ref.Bereich	(GOÄ)
<u>Serum(1)</u> 16.03.2021 15:56					
Free Thyroxine FT4	HR.1.3	18	pmol/l	12 - 22	
Thyroid-stimulat. Hormone TSH	HR.3.6	0.22	mIU/l	0.4 - 3.8	
Lowered TSH level while fT4 is still normal. This finding indicates a latent hyperthyroid metabolic situation. Additional determination fT3 is recommended. Differential diagnosis: hormonal finding under overdosed therapy. Under treatment for goiter a TSH level of 0.3 - 1.2 mIU/l should be aimed for. (Exception: status after papillary or follicular thyroid carcinoma.)
